MHQP 2005 Adult Routine Preventive Care Recommendations

FINAL

	18 - 29 Years	30 - 39 Years	40 – 49 Years	50 – 64 Years	65 + Years
Health Maintenance Visit					
At Every Age Obtain initial/interval history, including family history of disease Perform age appropriate physical exam. Provide preventive screenings and counseling as below. Update immunizations. For current immunization schedules, refer to the U.S. Centers for Disease Control and Prevention 2005 Adult Immunization Guidelines.	Annually for ages 18-21. Every 1-3 years, depending on risk factors for ages 22-29.	Every 1-3 years, depending on risk factors.	Every 1-3 years, depending on risk factors.	Annually.	Annually.
LABS AND SCREENINGS					
Cancer Screening					
Breast Cancer	Advise mammography for pat include: family history of pre-	and provide self-exam instruction. ients at high risk. Risk factors menopausal breast cancer (mother of breast/ovarian/endometrial	 Perform clinical breast exam and provide self-exam instruction. Annual mammography at discretion of clinician/patient. 	 Perform clinical breast exam and provide self- exam instruction. Annual mammography. 	 Perform clinical breast exam and provide self-exam instruction. Annual mammography through age 69; > age 70 at clinician/patient discretion.
Cervical Cancer (Pelvic Exam & Pap Test)	 Initiate Pap test and pelvic exam at 3 years after first sexual intercourse or by age 21. Perform pelvic exam and Pap test every 1-3 years, depending on risk factors. Pap test may be performed at 3-year intervals only after 3 consecutive negative results. Risk factors include: failure to receive regular Pap tests; history of cervical tumors; infection with HPV (human papillomavirus) or other sexually transmitted diseases; high-risk sexual behavior; and HIV/AIDS. The option to omit Pap test after age 65 may be offered if there is documented evidence of consistently negative results. 				

	18 - 29 Years	30 - 39 Years	40 – 49 Years	50 – 64 Years	65 + Years	
Colorectal Cancer	Not routine except for patients at high risk. Risk factors include: diagnosis in a first-degree relative; specific genetic syndromes; inflammatory bowel disease; and non-cancerous polyps. High-risk patients should be screened more frequently using complete colonoscopy at clinician/patient discretion.			 Colonoscopy at age 50 and then every 10 years, <u>OR</u> Annual fecal occult blood test (FOBT) plus sigmoidoscopy every 5 years, <u>OR</u> Double-contrast barium enema every 5 years, <u>OR</u>. Annual FOBT. Each of the screening strategies has advantages and disadvantages. Screen patients after discussion of the effectiveness, strength of evidence, risks, and complexity of each testing strategy to ensure an informed choice. Screening after age 80 at clinician/patient discretion. 		
Testicular & Prostate Cancer	every 1 to 3 years at cl • Prostate cancer screeni	ng not routine.	 Perform DRE exam for patients at high risk for prostate cancer. Discuss risk and benefits of prostate specific antigen (PSA) blood test with all patients. Offer PSA screening for high-risk patients at clinician/patient discretion. Risk factors include family history and African-American ancestry. 	(PSA) blood test with Offer PSA screening	nefits of prostate specific antigen n all patients beginning at age 50. at clinician/patient discretion.	
Skin Cancer	 Perform skin exams every 3 years between the ages of 20 and 39 and annually age 40 and older, regardless of skin tone and color. Perform skin exams more frequently at clinician discretion based on risk factors, including: age; personal history of skin cancer or repeated sunburns early in life; family history; certain types and a large number of moles; light skin, light hair, and light eye color; sun-sensitive skin; and chronic exposure to the sun. Educate about skin cancer. Counsel to limit exposure to the sun (especially between 10am and 4pm), to fully cover skin with clothing and hats, and to use sun block (SPF 15 or greater). 					
Other Recommended Screening						
Body Mass Index	 Screen for overweight. Consult the CDC's growth and body mass index (BMI) charts for ages 2-20 (www.cdc.gov/growthcharts/) and the CDC's BMI chart for adults for ages 21 and older (www.cdc.gov/nccdphp/dnpa/bmi/index.htm). Screen annually for eating disorders. Ask about body image and dieting patterns. Counsel on the benefits of physical activity and a healthy diet to maintain a desirable weight for height. Offer more focused evaluation and intensive counseling for adults with BMI opromote sustained weight loss for overweight adults. 					
Hypertension	Screen for high blood pressure at every acute/non-acute medical encounter and at least once every 2 years.					
Cholesterol	opportunity is nonfas with high-risk at clinic age.	sly tested. Screen every 5 with fasting lipoping and total cholesterol is >200 mg/dl or hand discretion. High risk includes family his to have high cholesterol and heart disease sysical activity.	HDL is <40 mg/dl, a follow up lipoprote story of premature heart disease or hyp	in profile should be performe perlipidemia; hypertension; lo	d. More routine screening for patients ow HDL; diabetes; tobacco use; and	

	18 - 29 Years	30 - 39 Years	40 – 49 Years	50 – 64 Years	65 + Years
Diabetes (Type 2)	include: age; first-degree in vascular disease; elevated A fasting blood sugar is the	inning at age 45. Screen more often and be relative with diabetes; physical inactivity; rad cholesterol/lipid levels; history of gestation e preferred diagnostic test. The 2-hour oral mation at www.mass.gov/dph/fch/diabetes	ice/ethnicity (African American, Hispar nal diabetes or birth of a baby > 9lbs; i I glucose tolerance test is also accepta	nic, Native American, Asian); hi impaired glucose tolerance; or p	gh blood pressure; history of polycystic ovary syndrome.
Infectious Disease Screening					
Sexually Transmitted Infections (Chlamydia Gonorrhea, & Syphilis)	 For chlamydia and gonorrhea: Sexually active patients under age 25: Screen annually. Consider urine-based screening for women when a pelvic examination is not performed. Patients age 25 and over: Screen annually, if at risk. Risk factors include: inconsistent use of condoms and new or multiple sex partners since last test; history of and/or current sexually transmitted infection; partner has other sexual partner(s). Screen pregnant women at the first prenatal visit and in the third trimester, if at risk. 				
	months; exchanging • Screen pregnant wor	stactors include: history of and/or current in sex for money or drugs; and men having somen at the first prenatal visit and in the third	ex with other men. d trimester, if at risk.	·	one sexual partner within the past 6
HIV	 Advise about risk factors for sexually transmitted infections (STIs) and counsel about effective ways to reduce the risk of infection. Routine testing of all patients at increased risk, including pregnant women at increased risk. Risk factors include: having received blood or blood products prior to 1985; men having sex with other men; drug abuse; history of prior sexually transmitted infections; new or multiple sex partners; and inconsistent use of condoms. Universal offering of and counseling about HIV/AIDS testing to all pregnant women. Consider "opt-out" strategies for testing. Advise about risk factors for HIV infection. 				
Hepatitis C	Periodic testing of all patients at high risk. Risk factors include: illicit injection drug use; receipt of blood product for clotting problems before 1987 and/or receipt of a blood transfusion or solid organ transplant before July, 1992 (if not previously tested); long-term kidney dialysis; evidence of liver disease; a tattoo or body piercing by non-sterile needle; risky sex practices (not using condoms, multiple sex partners).				
Tuberculosis (TB)	Tuberculin skin testing for all patients at high risk. Risk factors include: having spent time with someone with known or suspected TB; having HIV infection; coming from a country where TB is very common; having injected illicit drugs; living in U.S. where TB is more common (e.g., shelters, migrant farm camps, prisons); health care worker; or spending time with others with these risk factors. Determine the need for repeat skin testing by the likelihood of continuing exposure to infectious TB.				
Sensory Screening					
Eye Exam for Glaucoma	Every 3-5 years in hi	onts with no risk factors. gh-risk patients. Risk factors include: cestry, age, family history of glaucoma, atients with diabetes.	 Every 2-4 years. Screen annually in patients with diabetes. 	 Every 2-4 years. Screen annually in patients with diabetes. 	 Every 1-2 years. Screen annually in patients with diabetes.
Hearing and Vision Assessment				Ask about hearing and vision the availability of treatment v	n impairment, and counsel about when appropriate.
General Counseling and Guidance					
Preconception Counseling	 Encourage schedulin Inform patients on the often before pregnan 	child bearing age take to take a daily multi- g a visit for preconception counseling. e impact of alcohol, drug, and environment cy is diagnosed. men with specific nutritional guidelines to e	al exposures in early pregnancy,		

	18 - 29 Years	30 - 39 Years	40 – 49 Years	50 – 64 Years	65 + Years	
Osteoporosis	Counsel about preventive measures, such as dietary calcium and vitamin D intake, weight-bearing exercise, and smoking cessation.					
			Risk factors include: age history of fractures as an small-bone structure and certain menopause or me little exercise); and certain Counsel on the risks and be hormonal therapies. Provide BMD testing for a	all postmenopausal women who nal risk factors for osteoporotic	Provide BMD testing. Counsel elderly patients on specific measures to prevent falls.	
Dementia/Cognitive Impairment				 older patients. Evaluate mental status in performing daily activities. Examine patients suspected 	ed of having dementia for other al status, including depression,	
Menopause Management				Counsel all menopausal women on the management of menopause, including the risks and benefits of hormonal and non-hormonal therapies.		
At Every Age						
Depression/Suicide	 illnesses; little social supp Ask high-risk patients the two weeks, have you felt 	oort; stress; and current alcohol/ following questions as a screer little interest or pleasure in doing	uate risk factors. Risk factors include: far drug abuse. ning tool for depression: Over the past tw g things? A YES response to either quest lestioning about suicidal thoughts, impuls	ro weeks, have you felt down, depression requires further evaluation for dep	sed, or hopeless? Over the past pression.	
Alcohol/Substance Abuse	 Assess history of alcohol/drug use. Brief questionnaires such as the CAGE or AUDIT may help clinicians assess likelihood of problem or hazardous drinking. Counsel about the effects of alcohol use/substance abuse. Counsel not to drink and drive or ride with someone who is under the influence of alcohol or other substance. Advise pregnant women to stop drinking alcohol during pregnancy and advise them of the potential harmful effects of drug use on fetal development. For information, resources, or treatment referral, contact the Massachusetts Substance Abuse Information and Education Helpline at 1-800-327-5050.

	18 - 29 Years	30 - 39 Years	40 – 49 Years	50 – 64 Years	65 + Years		
Diet/Nutrition	 Counsel on the importance of a healthy diet in the prevention of disease, including limiting dietary intake of fat (especially saturated fat) and cholesterol, maintaining caloric balance in diet, and choosing foods containing fiber (i.e., fruits, vegetables, grain products). Counsel to consume recommended amounts of calcium and vitamin D. Also see osteoporosis guidelines. 						
Physical Activity	Counsel on the importance of regular physical activity in the prevention of disease. Picture and travelation with the crime prevention (a.g., prelities) for extension and prevention.						
	Discuss non-traumatic weight-bearing exercise (e.g., walking) for osteoporosis prevention.						
Safety/Injury and Violence Prevention	 Counsel about ways to prevent household and recreational injuries, for example: Alcohol and substance use Smoke alarm/carbon monoxide detectors Helmet use for sports (e.g., cycling, skiing, in-line skating) and motorcycles Potential risks of tattooing or body piercing Fall prevention measures in the elderly Motor vehicle safety/seatbelt use Advise about the dangers of firearms possession, particularly handguns, in the home and advise ways to reduce the risk of injury. Advise to keep guns away from children and recommend the voluntary removal of the gun from the home. Counsel high-risk patients on the risks of violent injury associated with easy access to firearms and alcohol/drug use. Counsel high-risk patients to learn non-violent approaches to conflict resolution (or refer them to counseling). 						
Family Violence/Abuse	Ask all patients the following by someone? Are you in a re uncomfortable?	lationship with a person who t	for family violence/abuse: Within the hreatens or physically hurts you? He	ne past year have you been hit, slapp as anyone forced you to have sexua FE or Childhelp's National Child Abu	·		

Text on Backside on poster above logos of endorsing organizations:

These guidelines represent a compilation of recommendations from national agencies, including the United States Preventive Services Task Force (USPSTF), the American Cancer Society (ACS), the American College of Obstetrics and Gynecology (ACOG), the American College of Physicians (ACP), and the American Academy of Family Physicians (AAFP). These guidelines have also been endorsed by the following organizations. (List of logos)

Text at bottom of logos:

Note: These recommendations represent a core set of clinical guidelines for an asymptomatic patient from the general population. The guidelines should not supplant clinical judgment or the needs of individual patients. These guidelines are intended as quality practice recommendations and are not intended as a description of benefits, conditions of payment or any other legal requirements of any particular health plan or payor. Each health plan or payor makes its own determination of coverage and benefits. In the event that these practice recommendations are inconsistent with any applicable laws or regulations, such laws or regulations take precedence.
